Tobacco and tobaccoproducths--Determination of maleic hydrazide residues UV Spectrophotometer method
Foreword

The English version hereof has been translated directly from the openly-published Chinese standard "GB/T 19611-2004 Tobacco and tobaccoproducts—Determination of maleic hydrazide residues UV Spectrophotometer method".

In the event of any discrepancy in the process of implementation, the Chinese version "GB/T 19611-2004 Tobacco and tobaccoproducts—Determination of maleic hydrazide residues UV Spectrophotometer method" standard shall prevail.

This is a preview version of GB/T 19611-2004 standard; The GB/T 19611-2004 standard official version needs to be purchased.
What is GB/T 19611-2004 standard?

GB/T 19611-2004 standard is the China national standard for "Tobacco and tobaccoproducts—Determination of maleic hydrazide residues UV Spectrophotometer method";

GB standard also called as Guo Biao Standards, China GB standards are classified as two stages, Mandatory or Recommended. Mandatory standards have the force of law as do other technical regulations in China. They are enforced by laws and administrative regulations and concern the protection of human health, personal property and safety. All standards that fail outside of these characteristics are considered Recommended standards. China GB standards can be identified as Mandatory or Recommended by their prefix code, Prefix code GB are Mandatory standards, GB/T are Recommended standards (Quasi-Mandatory standards);

Why do I need to be compliance with GB/T 19611-2004 Standard?

In China, All products or services must be complied with GB standards, no matter domestic or imported products, Any products being sold in China are required to be tested in order to ensure their compliance with GB standards;

If you want to export products or services to huge Chinese market, need to understand and be aware of the complexities and necessary requirements under the vast range of GB standards, need to ensure they are meet the requirements of china national GB standards; The outcome of failing to comply with GB standards can include the rejection of products during importation as well as products being seized from stores, resulting in a significant impact on retailers and manufacturers in terms of reputation and cost.
